

Intruder Alarm Maintenance Service Visits

What we do:

- Check history of alarm system since last maintenance.
- Visual inspection of all major components including cabling and connections for signs of deterioration, where accessible.
- Check mains power supply for correct voltages including charging rates.
- Check battery power supply for correct charge rates.
- Check and test all detection devices.
- Check satisfactory operation of manually operated device.
- Check and test all audible warning devices, sirens and speakers.
- Check and test remote signalling equipment where applicable and ensure correct signals are being sent.
- Repair minor faults where necessary (additional cost may apply).
- Ensure user codes are up to date and all users are operating the system correctly and feel confident to do so.
- Log all test results on a service docket.
- Ensure system is in day mode at the end of the service.
